

Solaris Health - Deployment Complete!

Date: June 26, 2026
Status: **LIVE & RUNNING**

Your App is Live!

Public URL: <https://solaris-health.abacusai.cloud>

Deployment Summary

What's Running

Service	Status	Port	Container
PostgreSQL Data-base	Running	5432	luca-passport-post-gres-1
Backend API	Running	5000	luca-passport-backend-1
Frontend App	Running	3000	luca-passport-fron-tend-1
Nginx Reverse Proxy	Configured	80	System nginx

Database Status

- Schema initialized
- Demo data seeded
- Ready for production use

Demo Login Credentials

Patient Accounts

- Email:** sarah@solaris.health
Password: demo123
- Email:** majd@luca.health
Password: demo123

Practitioner Account

- **Email:** elena@solaris.health
- **Password:** demo123

Admin Account

- **Email:** admin@solaris.health
- **Password:** admin123

⚠ **Remember to change these credentials in production!**

Production Environment

Secrets

Secure production secrets have been generated and stored in:

```
/home/ubuntu/luca-passport/.env.production
```

Contains:

- JWT_SECRET (auto-generated)
- DB_PASSWORD (auto-generated)
- API_URL (configured for production)

Docker Services

All services are running via Docker Compose with:

- ✓ Automatic restarts enabled
 - ✓ Persistent volume for database
 - ✓ Health checks configured
 - ✓ Production-optimized builds
-

What You Built

Solaris Holistic Health - A sovereign health platform featuring:

- 🎬 Cinematic “Celestial Sanctuary” onboarding
- 🧬 Solaris Method assessment (4 aspects × 8 body systems)
- 🏠 Health Passport with sovereign data export
- 🤖 LUCA AI health companion
- 🌐 Practitioner marketplace
- 👥 Multi-actor system (patient, practitioner, admin)
- 🎁 Reward system for health sovereignty
- 🔑 Email authentication
- 📊 Beautiful dark navy/emerald/gold design

Tech Stack:

- Frontend: React + Vite + Tailwind CSS
- Backend: Node.js + Express

- Database: PostgreSQL 15
- Infrastructure: Docker Compose + Nginx
- Deployment: Abacus.AI SuperComputer

Quick Health Checks

```
# Check all services status
cd /home/ubuntu/luca-passport
docker compose ps

# View logs
docker compose logs -f

# Check backend health
curl http://localhost:5000/health

# Check frontend
curl http://localhost:3000

# Check public URL
curl https://solaris-health.abacusai.cloud
```

Common Commands

View Logs

```
cd /home/ubuntu/luca-passport

# All services
docker compose logs -f

# Specific service
docker compose logs -f backend
docker compose logs -f frontend
docker compose logs -f postgres
```

Restart Services

```
# Restart all
docker compose restart

# Restart specific service
docker compose restart backend
docker compose restart frontend
```

Stop/Start

```
# Stop all
docker compose down

# Start all
docker compose up -d

# Stop and remove volumes (⚠ deletes database)
docker compose down -v
```

Update Application

```
cd /home/ubuntu/luca-passport

# Pull latest changes (when pushing to GitHub)
git pull

# Rebuild and restart
docker compose up -d --build
```

Next Steps

1. Test Your Application

Visit <https://solaris-health.abacusai.cloud> and:

- ☒ Test patient registration/login
- ☒ Complete the Solaris Method assessment
- ☒ Test the LUCA AI companion
- ☒ Try the practitioner marketplace
- ☒ Test admin dashboard

2. Push to GitHub (Optional)

To enable collaboration and version control:

```
cd /home/ubuntu/luca-passport

# Commit your changes
git add .
git commit -m "Production deployment"

# Push to GitHub (requires GitHub authentication)
git push -u origin master
```

Note: You'll need to either:

- Connect GitHub from [Cloud Services UI](https://supercomputer.abacus.ai) (<https://supercomputer.abacus.ai>)
- Or provide a personal access token

3. Security Hardening

Before launching to real users:

- [] Change all demo passwords
- [] Remove autofill buttons from login forms
- [] Update CORS settings in backend
- [] Enable rate limiting
- [] Set up monitoring/alerts
- [] Configure database backups
- [] Review and update JWT expiration times

4. Custom Domain (Optional)

If you have your own domain:

1. Add domain in SuperComputer settings
2. Update DNS records at your registrar
3. SSL certificates are automatic!

Monitoring & Maintenance

Health Endpoints

- Backend API: <https://solaris-health.abacusai.cloud/api/health>
- Frontend: <https://solaris-health.abacusai.cloud>

Database Backups

```
# Manual backup
docker compose exec postgres pg_dump -U luca_user luca_passport > backup_$(date +
%Y%m%d).sql

# Restore from backup
docker compose exec -T postgres psql -U luca_user luca_passport < backup_20260626.sql
```

Resource Usage

```
# Check container stats
docker stats

# Check disk usage
df -h
docker system df
```

Troubleshooting

Services Won't Start

```
# Check logs
docker compose logs

# Check if ports are in use
sudo lsof -i :3000
sudo lsof -i :5000
sudo lsof -i :5432

# Restart everything
docker compose down
docker compose up -d
```

Database Connection Issues

```
# Check Postgres is running
docker compose ps postgres

# Test connection
docker compose exec postgres psql -U luca_user -d luca_passport -c "SELECT 1;"

# View database logs
docker compose logs postgres
```

Nginx Issues

```
# Test nginx configuration
sudo nginx -t

# Reload nginx
sudo systemctl reload nginx

# View nginx logs
sudo journalctl -u nginx -n 50
```

Cost Estimate

Abacus.AI SuperComputer:

- \$10/month all-inclusive
- Includes: compute, database, SSL, custom domain support, backups

Total: ~\$10/month for production hosting 🎉

Documentation

All documentation is available in the repository:

- `README.md` - Project overview & features

- `DEPLOYMENT.md` - Alternative deployment platforms
 - `PRODUCTION.md` - Production checklist & best practices
 - `SUPERCOMPUTER.md` - Abacus SuperComputer guide
-

🌟 Success Checklist

- ✓ Code extracted and deployed
 - ✓ Docker containers built and running
 - ✓ Database initialized and seeded
 - ✓ Nginx configured for public access
 - ✓ Public URL live: <https://solaris-health.abacusai.cloud>
 - ✓ Health checks passing
 - ✓ Demo credentials ready
 - ✓ Documentation complete
-

🌅 Welcome to Production!

Your Solaris Holistic Health platform is now live and ready to change healthcare forever!

Live at: <https://solaris-health.abacusai.cloud>

Built with sovereignty, healing, and love. ❤️

Deployment completed: June 26, 2026, 08:40 UTC

Deployed by: Abacus AI Agent

Platform: Abacus.AI SuperComputer
